

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-2. Canceled

3. (Original) A display device comprising:

a substrate having a mirror surface; and

a display means over the substrate having a mirror surface; and

an image sensing means over the substrate having a mirror surface,

wherein a plurality of light-emitting elements each having a luminescent material sandwiched between a pair of electrodes having light-transmittivity are arranged in the display means, and

wherein a plurality of photovoltaic conversion elements are arranged in the image sensing means.

4. (Original) A display device comprising:

a substrate having a reflecting surface;

a display means over the substrate having a reflecting surface; and

an image sensing means over the substrate having a reflecting surface,

wherein a plurality of light-emitting elements each having a luminescent material sandwiched between a pair of electrodes having light-transmittivity are arranged in the display means,

wherein a plurality of photovoltaic conversion elements are arranged in the image sensing means, and

wherein the display means and the image sensing means are secured to the substrate with a barrier film therebetween.

5-8. Canceled

9. (Original) A display device according to claim 3, wherein the display device is used as a side-view mirror for vehicle.

10. (Original) A display device according to claim 4, wherein the display device is used as a side-view mirror for vehicle.

11-14. Canceled

15. (Original) A display device according to claim 3, wherein the display device is used as a rearview mirror for vehicle.

16. (Original) A display device according to claim 4, wherein the display device is used as a rearview mirror for vehicle.

17-20. Canceled

21. (Original) A display device according to claim 3, wherein the display device is applied to an electronic device selected from the group consisting of a portable terminal and a PDA.

22. (Original) A display device according to claim 4, wherein the display device is applied to an electronic device selected from the group consisting of a portable terminal and a PDA.

23-26. Canceled

27. (Previously presented) A display device according to claim 3, wherein an insulating film is formed over the plurality of light-emitting elements and the photovoltaic conversion element is formed over the insulating film.

28. (Previously presented) A display device according to claim 4, wherein an insulating film is formed over the plurality of light-emitting elements and the photovoltaic conversion element is formed over the insulating film.

29. (New) A display device comprising:  
a substrate;  
a reflection coating film over the substrate;  
a first insulating film over the reflection coating film;  
a first light-transmissive electrode and a second light-transmissive electrode over the first light-transmissive electrode with a luminescent material sandwiched therebetween, over the first insulating film;  
a second insulating film over the second light-transmissive electrode; and  
a photovoltaic conversion element over the second insulating film.

30. (New) A display device comprising:  
a substrate;  
a reflection coating film over the substrate;  
a first insulating film over the reflection coating film;  
a transistor formed over the first insulating film;  
a first light-transmissive electrode electrically connected to the transistor, and  
a second light-transmissive electrode over the first light-transmissive electrode with a luminescent material sandwiched therebetween, over the first insulating film;  
a second insulating film over the second light-transmissive electrode; and  
a photovoltaic conversion element over the second insulating film.

31. (New) A display device according to claim 29, wherein the display device is used as a side-view mirror for vehicle.

32. (New) A display device according to claim 30, wherein the display device is used as a side-view mirror for vehicle.

33. (New) A display device according to claim 29, wherein the display device is used as a rearview mirror for vehicle.

34. (New) A display device according to claim 30, wherein the display device is used as a rearview mirror for vehicle.

35. (New) A display device according to claim 29, wherein the display device is applied to an electronic device selected from the group consisting of a portable terminal and a PDA.

36. (New) A display device according to claim 30, wherein the display device is applied to an electronic device selected from the group consisting of a portable terminal and a PDA.

37. (New) A display device according to claim 29, wherein the photovoltaic conversion element includes a p-layer, i-layer, and an n-layer, wherein the p-layer is connected to an electrode and the n-layer is connected to an electrode.

38. (New) A display device according to claim 30, wherein the photovoltaic conversion element includes a p-layer, i-layer, and an n-layer, wherein the p-layer is connected to an electrode and the n-layer is connected to an electrode.

39. (New) A display device according to claim 29, wherein the reflection coating film is at least one selected from the group consisting of aluminum, silver, gold, copper, cadmium,

nickel, platinum, rhodium, tungsten, titanium, tantalum, molybdenum, chrome, neodymium, iron, nickel, cobalt, zirconium, zinc, ruthenium, palladium, osmium, iridium, and tin.

40. (New) A display device according to claim 30, wherein the reflection coating film is at least one selected from the group consisting of aluminum, silver, gold, copper, cadmium, nickel, platinum, rhodium, tungsten, titanium, tantalum, molybdenum, chrome, neodymium, iron, nickel, cobalt, zirconium, zinc, ruthenium, palladium, osmium, iridium, and tin.
